

Who is FineLine

FineLine Fuel Systems, a family owned and operated business, manufactures fuel tank sending units for passenger vehicles in a small town in Nova Scotia. We're a team of hard working, honest people joined together by a passion to build a superior product.

We service our customers the way we want to be serviced, like family. With uncompromising values and morals, and an internal sence of fairness. FineLine is dedicated to continuously improving and securing a place in the automotive industry globally.

Our Vision

Develop superior products through our values, spirit, and passion to be global leaders in the automotive industry.

Our Mission

Grow a successful company through profitable customers with innovative people and a commitment to continuous improvement.

Production Process

A 3D model of each unit begins our quality process. In addition, each unit is subjected to numerous quality checks at each step in production. From initial spot-weld checks, to solder checks, to a final inspection which ensures precise quality every time.

FineLine has adopted Lean Manufacturing Principles to further improve productivity and increase customer satisfaction. We are currently preparing for our ISO Certification which will put a formal quality stamp on all FineLine Product.

FineLine Technology

Our CNC and Automated Equipment give FineLine the ability to bring a myriad of new models to market quickly with 100% quality assurance.

A computerized measuring machine enhances our ability beyond OE specs to design and inspect all components, sending units, and tooling used in production.

Superior Sensors

FineLine Fuel Systems uses superior quality thick film sensor technology which doubles the life span compared to conventional wire wound sensors. These very same sensors are utilized by some of the largest heavy equipment manufacturers in the world.

FineLine Commitment

FineLine promises a 24 hour turnaround time and boasts a 99% fill rate getting more product to market faster. FineLine is continuously broadening their model coverage, releasing between 25 and 50 new models each year.
